Sample-Quotation

Your ref. Sample quote	Our ref. QU-10/193-779	Person in charge Chris Rampe	Phone 03 453 0340	Date 14/02/2011
---------------------------	---------------------------	---------------------------------	----------------------	--------------------

Dear Customer,

we are pleased to provide you with the details of our products and services, which we trust will be to your satisfaction. This quote is an economic example for a house/lot of windows & doors - we can certainly also provide other design options than the ones included in this quote, e.g. bifold doors & windows, sliding doors & windows, arch- doors & windows, colonial bars, etc...

Timber joinery:

All windows and doors are manufactured according to the European standard EN 14354-1 (CE certificate) which ensures an exceptional thermal performance, durability and a maximum lifespan. Eurotech WinDoors provides a 10 year warranty on handles which are tested from independent test institutes in Germany. The timber we use is 3 layer laminated to ensure maximum strength and stability. All windows and doors are made in our factory in Dunedin, New Zealand.

Timber type:

Siberian Larch (lam.), Kiln dried to 13% ±2% moisture content. 3 layer laminated timber using D4 quality glue. A grade timber without defects.

Hardware:

ROTO NT window hardware, RotoSill Nano tilt and turn hardware in silver (made in Germany), Handle: Window handle Tokyo (F1 Silver)

Rain protection:

Black-brown anodised, thermally broken for best thermal performance

Glazing:

4 clear / 4 clear including external & internal seal, 24mm double glazed units

Coating:

All units will be finished with a quality waterbased product. We use an air assisted spray system to ensure maximum durability and furniture like finish. The V-groves and endgrain are sealed with a Sikkens product. All units get sprayed prior the hardware fitting. The timber will be finished in **Sikkens Walnut**.

Why is Eurotech WinDoors joinery superior to standard aluminium and ordinary timber joinery?

Eurotech Windows products are made of **naturally durable timber in 68mm thickness** compared to 40mm thickness of standard sash windows. The sashes and frames are **3-layer laminated** which makes twisting and warping a problem of the past, even in harsh areas like Central Otago where our joinery is used successfully.

Siberian Larch is far superior compared to Cedar and Pine when it comes to **mechanical wear and stability** as it is by far harder. Siberian Larch does NOT need chemical treatment which keeps you in your home and us in the factory **healthy**; it also doesn't contribute to the toxic waste problem of treated timber in the future.

Our sashes and frames leave the factory **polished with a durable water based Sikkens product**. This saves you money as you do not need a painter to finish your windows after installation. In 99% of all installations we don't need a scaffold which keeps installation cost down. We apply the wood stains and paints with a **Graco air coat system to ensure a proper film thickness**. One coat with our spray system applies more product than a painter can apply with 3 coats with a brush - and there are no brush strokes. We apply 3 coats of the tried and true Sikkens system and also **seal the V-joints and the end grain**.

The advantage of wooden joinery is also that they can be repainted and look like new windows even after years instead of aluminium joinery which only gets older and the colour fades.

Eurotech WinDoors[®]

Timber windows - built to last

Our system is designed for 24mm double glazing and 32mm triple glazing which is far superior from a thermal point of view than 16 or 20mm units. Thermally not broken aluminium frames condensate and can be the cause for an unhealthy climate in the room. **Wooden joinery regulates the moisture level in the room** as it is hygroscopic. The other advantage of 68mm thick frames is the **brilliant thermal performance** which saves you money from day one.

The corner joins of our joinery are **double tenon joints for maximum strength**. Aluminium frame mitres are connected with screws or rivets and will NOT stand the test of time as the joints wear off from the use of the window. Our seals are **uninterrupted wrap around seals** which won't shrink. Seals of other manufacturers are glued in the mitres and will shrink in time which leads to drafty windows.

All our **joinery is 3d adjustable** (with an allen key) which allows the customer to adjust the windows down the track himself without the need of a tradesman.

As a standard, all our products are equipped with a **multipoint locking system** which ensures **security and a draft free window or door**. Aluminium joinery and standard 40mm timber sashes only lock where the handle is situated which will lead to draft in the long run. Our handles are fixed with an **8mm steel spindle and you can be certain that they won't fail (20.000 tilt & 30.000 turn cycles tested)**.

All inward opening windows and doors are seen from the inside (standard).

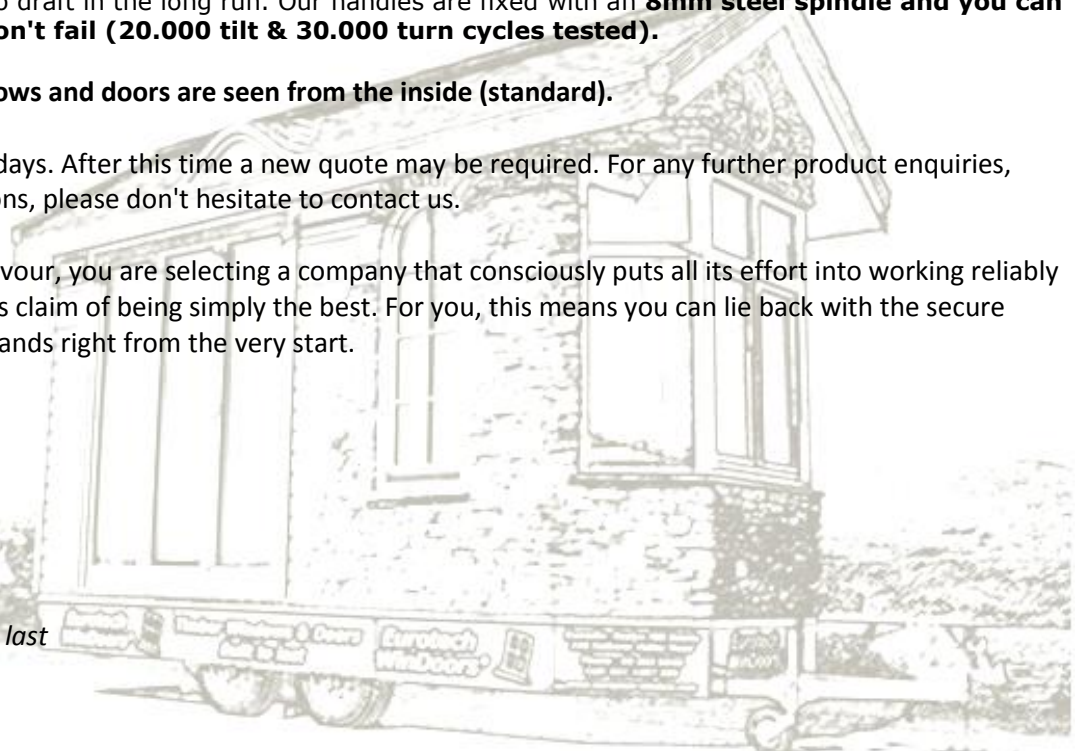

This quote is valid for 30 days. After this time a new quote may be required. For any further product enquiries, quotes or general questions, please don't hesitate to contact us.

Once you decide in our favour, you are selecting a company that consciously puts all its effort into working reliably and strives to live up to its claim of being simply the best. For you, this means you can lie back with the secure feeling of being in good hands right from the very start.

Best regards
